While most cyber-breaches that make the headlines are inflicted on large, national companies, the smaller breaches of local companies are actually far greater in number. 62% of cyber-breach victims are small to mid-sized businesses, which are at the greatest risk for an attack. Their level of preparation is low, and the costs of customer notification alone can be enough to do a small company irreparable financial harm. Source: Travelers Insurance, NYC

THE SECURITY ASSESSMENT MYTH

IT and business professionals have all heard that getting a security assessment will improve their business's security posture. The reality is that the vulnerabilities uncovered through most assessments never get addressed because many businesses struggle to find the resources (time, expertise, staff) to build and execute a remediation plan. In effect, that costly assessment becomes shelfware, never delivering promised improvements.

WHAT IS BEI.secure?

Xigent Solutions developed BEI.secure to help businesses build and execute an actionable security strategy using the FISA Assessment results as baseline metrics for improvement. Our security experts will guide you through a review of your FISAscore to understand the vulnerabilities your business faces. Additionally we will evaluate your current security governance to ensure that it aligns with your compliance requirements and business objectives.

With BEI.secure we will

- **Build the action plan** to remediate security vulnerabilities
- **Manage the plan** to ensure activities move forward
- **Perform security reassessments** and updates
- **Lead quarterly reviews** to track overall progress toward project goals

All of these activities are designed to make sure that your FISAscore doesn't just become a number but instead delivers tangible improvements in security and minimizes risk exposure for your business.

WHAT IS FISA?

FISA is a proprietary assessment tool encompassing the ISO, IEC, COBITs, CCS, CSC, NERC and the NIST Cybersecurity Framework. These combined standards create a new baseline to measure information Security best practices and remove the subjectivity common among many industry assessments.

WHY CHOOSE XIGENT SOLUTIONS?

Our purpose is to improve every client's IT and business outcomes by putting them on the path to Business Efficient IT (BEI). Because every organization has unique requirements their BEI will look different but for Xigent Solutions it always means a sustained focus and commitment to improvement and approaching each customer engagement as a long-term relationship, not merely a transaction. We believe that the strongest, longest-lasting business relationships are built on a foundation of trust, transparency, accountability, and continuous improvement.
