

S2ORG

DEFEND YOUR ORGANIZATION

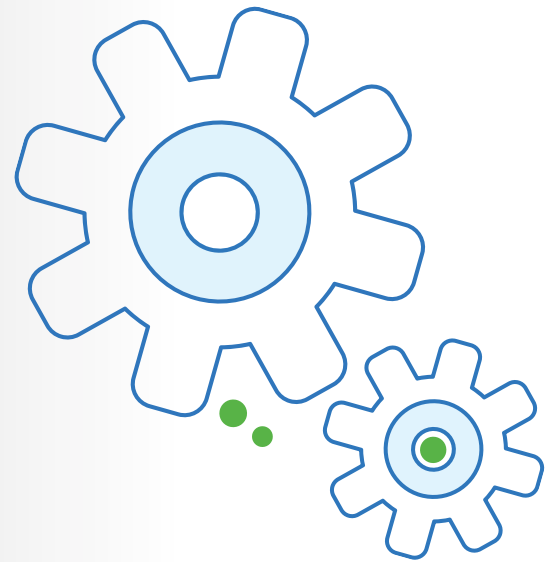

S2SCORE is a comprehensive information security assessment score based on standards such as NIST, HIPAA, ISO, etc. Using S2ORG you can get a baseline understanding of where your organization's security weaknesses are, build a roadmap, and track the improvements to the security of your organization over time.

S2ORG APPROACH

MEASURE your organization's risk and expose vulnerabilities in your information security program.

ROADMAP necessary changes to improve your organization's security posture in the most effective ways.

TRACK the improvements you've made to your security program in real-time and watch your S2SCORE rise.

A STEP-BY-STEP PROCESS FOR PRIORITIZING AND MITIGATING RISK POSED TO YOUR ORGANIZATION

ADMINISTRATIVE

The people part of information security, administrative controls are primarily procedures and policies that guide employee actions.

PHYSICAL

Physical controls are the means and devices to control physical access to sensitive information and protect the availability of the information.

INTERNAL TECHNICAL

Internal technical controls segments your network from the inside, ensuring that if someone did get in they wouldn't be able to get far.

EXTERNAL TECHNICAL

External technical controls protect your organization from the outside world and are traditionally what people think of when they think of cyber security.
